SAE J300	> 3.5	≤ 1.6	Report	Report

### Instructions

Select a specification from 'Specification list' to add to the performance comparison. Once selected the specification's performance map will be displayed on the chart along with some basic requirements in the data grid. A maximum of 15 specifications may be selected and overlaid to compare their relative performance.

The performance charts are not a literal translation of a performance specification and should not be used as a replacement for evaluating engine oil performance in accordance with the relevant vehicle manufacturer's requirements.
