Volkswagen RNS 510 pin assignments

Multi-pin connector 1, 8-pin, for loudspeaker outputs

- 1 – Rear right loudspeaker, positive
- 2 – Front right loudspeaker, positive
- 3 – Front left loudspeaker, positive

- 4 – Rear left loudspeaker, positive
- 5 – Rear right loudspeaker, negative
- 6 – Front right loudspeaker, negative
- 7 – Front left loudspeaker, negative
- 8 – Rear left loudspeaker, negative

Note! When used with a sound amplifier, the same pin assignments are used as line-in for the sound amplifier. To achieve this, the radio unit is programmed from “output stage power 26 dB” to “output stage line-out 12 dB” in the factory. Details on how to perform this can be found in [Volkswagen RNS 510 coding when installing with a factory amplifier](#).

Multi-pin connector 2, 8-pin, for voltage supply lines and CAN bus

- 9 – CAN bus, high
- 10 – CAN bus, low
- 11 – Display voltage supply, positive, optional for radio module low version only
- 12 – Voltage supply, negative, terminal 31
- 13 – Display HV CAN bus low, optional for radio module low version only, not for midline
- 14 – Display HV CAN bus high, optional for radio module low version only, not for midline
- 15 – Voltage supply, positive, terminal 30
- 16 – Anti-theft coding control signal, SAFE, positive

Multi-pin connector 3, 12-pin, for telephone and microphone signals

- 1 – Microphone input, negative
- 2 – AUX output, audio, right
- 3 – AUX output, common signal earth
- 4 – Microphone output, negative
- 5 – Telephone audio input signal left, negative
- 6 – Telephone audio input signal right, negative
- 7 – Microphone input, positive
- 8 – AUX output, audio, left
- 9 – Microphone output, positive
- 10 – Telephone mute (mute switch for radio)
- 11 – Telephone audio input signal left, positive
- 12 – Telephone audio input signal right, positive

Multi-pin connector 4, 12-pin, for CD changer control and CD audio input signals

- 1 – AUX signal input, left
- 2 – AUX signal earth
- 3 – CD changer, audio signal earth
- 4 – CD changer, voltage supply, positive, terminal 30, contact continuous load greater than 1 A, temporary peak load 5 A
- 5 – Not assigned
- 6 – CD changer, DATA OUT (data exchange for CD changer control from radio navigation system to CD changer)
- 7 – AUX signal input, right

- 8 – CD changer, left audio channel, CD/L
- 9 – CD changer, right audio channel, CD/R
- 10 – CD changer, control line, switched positive
- 11 – CD changer, DATA IN (data exchange for CD changer control from CD changer to radio navigation system)
- 12 – CD changer, CLOCK (internal check protocol for data flow monitoring)

Multi-pin connector 5, audio and video, 26-pin

- 1 – Reserved for Debug RX protocol
- 2 – Reserved for Debug TX protocol
- 3 – Not assigned
- 4 – Video signal input, RGBS, negative (ground)
- 5 – Video signal output LF, Right (Audio use 17 for ground)
- 6 – Ground Sync input
(Internal universal preparation for mobile telephone, mobile telephone detection)
- 7 – Video signal output, vertical and horizontal synchronisation
(Internal universal preparation for mobile telephone, cradle and button evaluation)
- 8 – Video signal output, green
(Internal universal preparation for mobile telephone, cradle, aerial diagnosis)
- 9 – Video signal input, RGBS, negative (ground)
- 10 – Video signal input LF, right (Audio use 24 for ground)
- 11 – Video signal input, screening earth
- 12 – Video signal input, vertical and horizontal synchronisation
- 13 – Video signal input, green
- 14 – Not assigned
- 15 – Not assigned
- 16 – Not assigned
- 17 – Video signal output, LF, negative (ground)
- 18 – Video signal output LF, Left (Audio use 17 for ground)
- 19 – Video signal output, RGBS, negative (ground)
(Internal universal preparation for mobile telephone, cradle, negative)
- 20 – Video signal output, Blue

(Internal universal preparation for mobile telephone, switched terminal 30)

- 21 – Video signal output, Red
- 22 – Video signal input, LF, negative
- 23 – Video signal input, LF, left (Audio use 24 for ground)
- 24 – Video signal input, RGBS, negative (ground)
- 25 – Video signal input, blue
- 26 – Video signal input, red

Connectors 6, aerial connectors

1 – AM and FM2 radio reception aerial connector, double Fakra, no coding, impedance 50 ohms, colour cream-white

2 – FM1 radio reception aerial connector, double Fakra, coding B, impedance 50 ohms, colour cream-white

3 – Navigation aerial connector, double Fakra, coding C, impedance 50 ohms, colour signal blue

Dear Friends,

i have Vw golf 6 (2009 Model) car and i wanna buy a brand new RNS 510 + Premium Bluetooth telephone kit

whats is the required parts (OEM's) and its part numbers

i am waiting your replies.

Thank you

Is there only RGB video outputs on the rns510? i have headrest monitors i would like to fit and

my intention is to get whatever dvd is playing on the rns510 to also play on the headrest monitors but my problem is they only have composite video inputs (YELLOW RCA CONNECTOR) so i was wondering if there is any way of connecting them upto the headunit without an expensive rgb to composite converter box.. 😞

Any help would be very greatly recieved...

Your only option is the conversion as per <http://www.my-gti.com/525/>

On the European RNS510, the Label for the pinouts has blanks where you have AUX Out pinouts.

Although the pins are actually populated on the unit itself, do you know if they are Live and actually give out an Aux out or are they only activated for US units?

Cheers

is that correct?

on the Multi-pin connector 5, audio and video, 26-pin are pins 4 and 9 of the same? Really?

4 – Video signal input, RGBS, negative (ground)

9 – Video signal input, RGBS, negative (ground)

Hi,

My Bury Take and Talk BT has stopped muting and playing through the car speakers since I replaced my RCD310 for a RNS510.

Why is the RNS510 so restricted and you cannot attach anything to it now even a simple AUX lead without buying OEM VW parts. I want to install reverse camera and that is also not simple as you have to code it aswell. This is a nice unit but you cannot do much with it as you have to buy everything from VW for over £200 pounds just to add bluetooth or MDI. This is rubbish when you already pay allot of money for the unit.
