

These are the informations from the navi- device:

What I did to update the navi tot he latest map- versions:

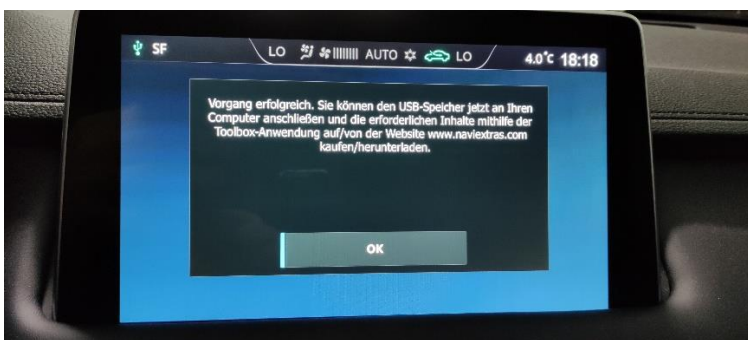

- 1.) I put an 14 GB-Stick (fat32) in the car and start the update- function on the navi:

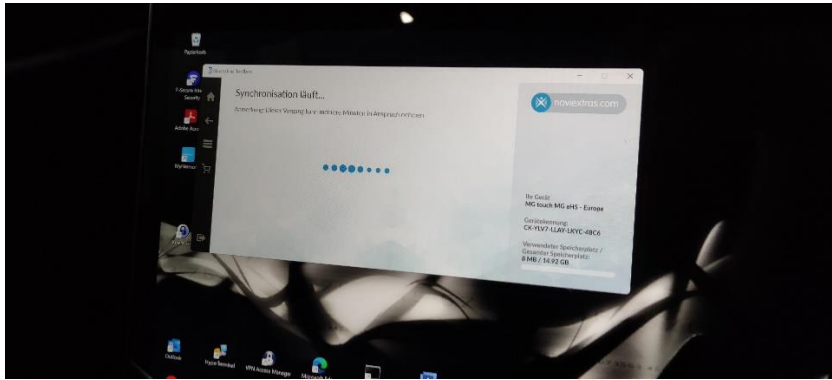

- 2.) I choose „ja“

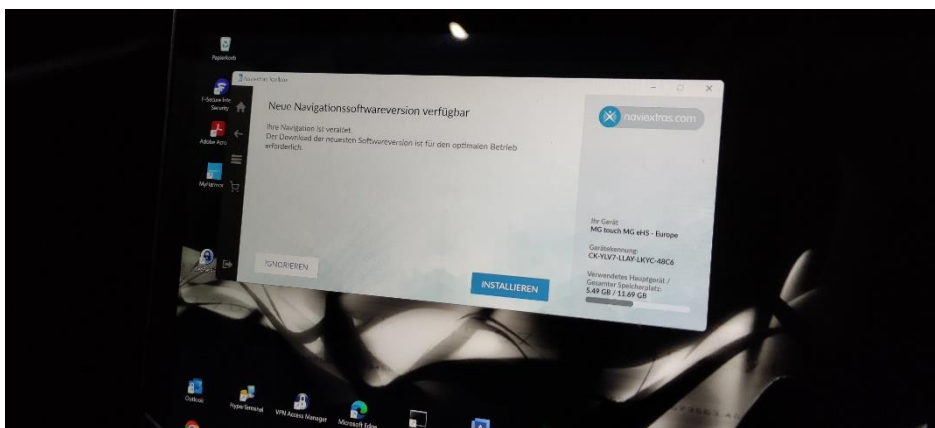

- 3.) The stick creation finished with no errors:

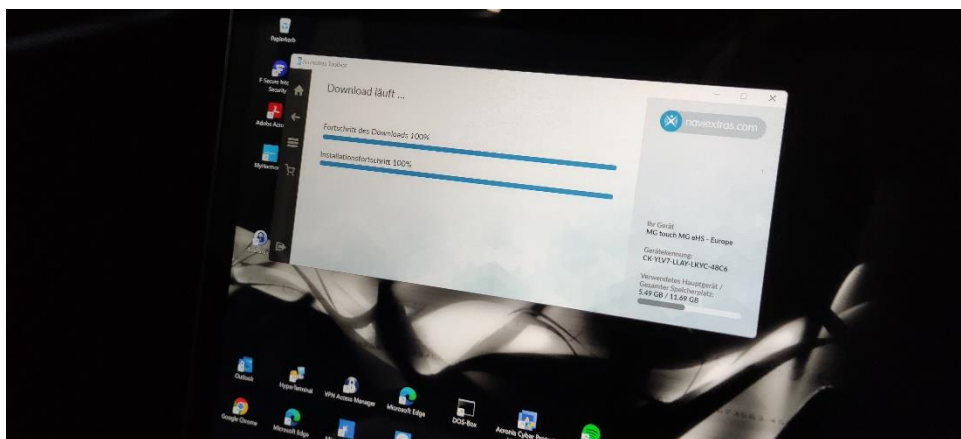

4.) The PC-tools recognizes the stick ..

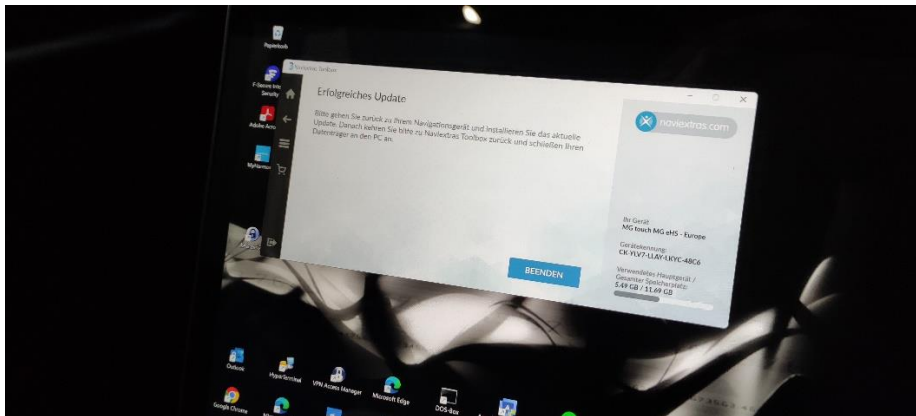

5.) .. and says, there is an update for the Navi- Software. I choose „Installieren“

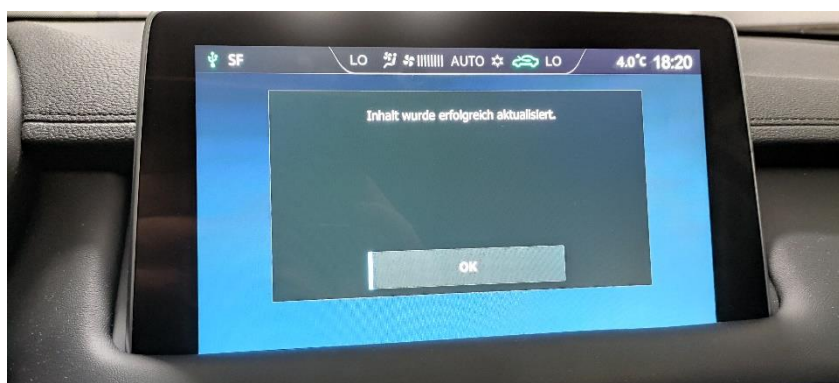

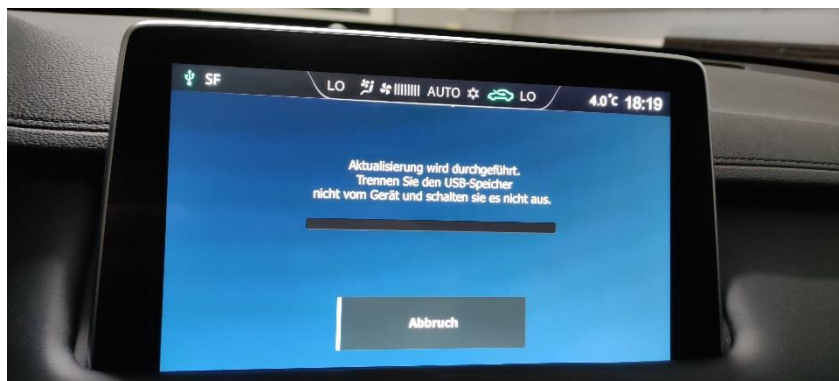

6.) the download starts (it takes only a few seconds .. is this normal?):

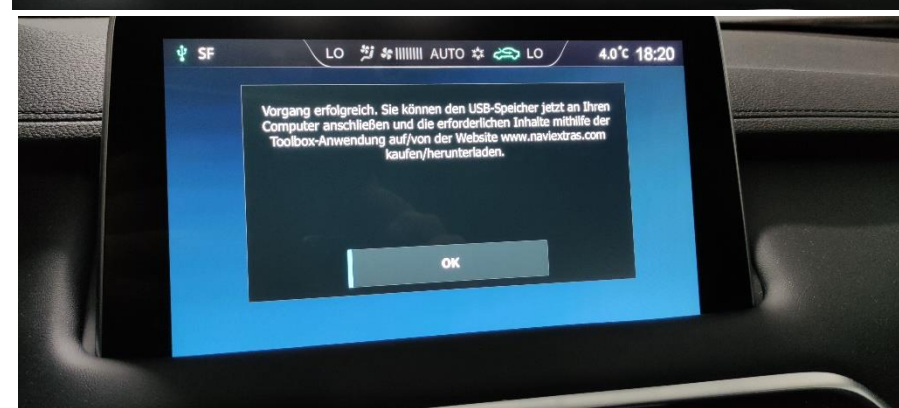

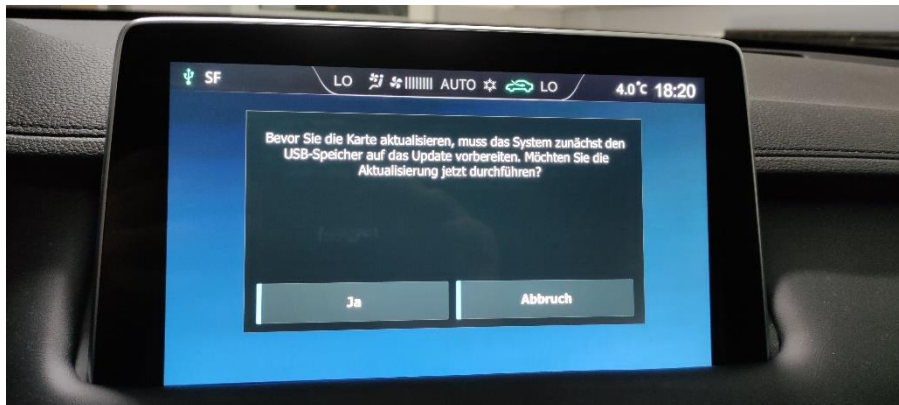

7.) the stick is ready.

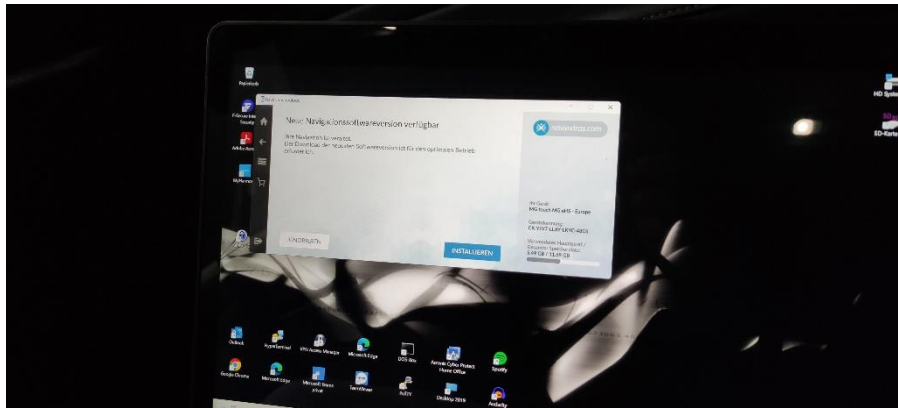

8.) I put the stick back in the car and start the update- process again:

If I put the stick now back in the pc, the pc-tool will not recognize the stick! I have to put it in the car again, start the update-process on the navi, this will create the files again:

The the PC-tool recognize the stick again, and the loop begins 😞 see step 5.) )

I have donwe this now ten times again and again ... evrytime the same result.

My you please help me?

Best regard

Ralph
